

**SECURITY, RISK &  
COMMUNICATIONS  
SOLUTIONS FOR  
CHALLENGING  
ENVIRONMENTS**

# ABOUT US

## REDUCING RISK FOR THOSE WHO FACE IT EVERY DAY

In today's environment, safety and security must always be front of mind. It's crucial to ensure these risks are identified, mitigated and managed as effectively as possible. That's where we come in.

Security Consulting Group (SCG) provides independent security and communications engineering, and security threat and risk consultancy services, to clients operating in challenging security environments.

**“Our team has a proven track record across a broad range of market sectors and we're proud of our contribution to the delivery of many complex and iconic projects.”**

Founded in 2014, we have since grown to become one of Australia's largest and most experienced security and communications consultancies, with offices in five states and territories, and a large team of SCEC-approved consultants, engineers and project managers drawn from diverse security backgrounds.

It is this diversity of expertise and experience, technical knowledge and skills, that enable us to deliver bespoke solutions and optimal security outcomes to some of Australia and New Zealand's largest private operators and state and federal governments.

# OUR MARKETS

## SCG OPERATES ACROSS ALL MARKET SECTORS, WITH A FOCUS ON HIGH-SECURITY ENVIRONMENTS.

We pride ourselves on being a trusted and responsive business partner, and have developed ongoing relationships with over 150 of Australia's largest government agencies, private entities and complex infrastructure owners, developers and operators. With offices in five states and territories, we're ideally situated to see the big picture while understanding local issues and our clients' requirements.

### DEFENCE

SCG provides end-to-end solutions to support defence entities, from new capability acquisition, during operation and through to retirement or disposal.

### GOVERNMENT & NATIONAL SECURITY

Our consultants know your entity and have the specialist knowledge to meet the most challenging security scenarios, protecting our national interests both domestically and overseas.

### JUSTICE

From prisons and police stations to courthouses, emergency services headquarters and training facilities, we've worked with nearly every provider in the sector in Australia and NZ to ensure these complex environments are both safe and secure.

### TRANSPORT

We all rely on secure transport systems and infrastructure to move bulk goods or travel across cities, across the country and internationally. We understand the security risks facing the transport industry, from air and road to rail and sea.

### SOCIAL INFRASTRUCTURE

We provide services for protection of all forms of social infrastructure, including the healthcare, financial, resources, education, cultural, industrial and commercial sectors.

### DATA & TECHNOLOGY

Our consultants have extensive experience providing security planning, design and engineering, and risk management, for some of Australia's largest data centres and technology providers.

# THE SCG DIFFERENCE

## OUR APPROACH IS CENTRED AROUND UNDERSTANDING AND MANAGING YOUR SECURITY RISK.

We recognise that effective security relies on integration of planning and design, technology and operational management. Sustained security performance is a continuous process of review and improvement to maintain it to as high a standard as possible, while bringing your risk as low as reasonably practicable.

## END-TO-END SOLUTIONS

While others provide part of the equation, at SCG we provide expertise across the security risk management, design, engineering and technology spectrum, for truly holistic and integrated security solutions.

## WE DON'T SHY AWAY FROM CHALLENGES

Some environments have an inherently high level of risk. We're used to working in areas of high exposure or greatly increased threat level and embrace, rather than avoid, the opportunity to use our specialist knowledge and strategies to help to mitigate your security risk to the lowest level practicable.

## SPECIALIST EXPERTISE & REAL-WORLD PERSPECTIVE

We are independent specialists from diverse security backgrounds. Our team members have a depth of real-world experience, meaning we understand your world and its security complexities.

## NATIONAL FOOTPRINT

With offices in Melbourne, Canberra, Sydney, Brisbane and Perth, we have a national footprint where needed, coupled with an understanding of local requirements.

## PROTECTIVE SECURITY

Our dedicated team of protective security consultants and engineers are well versed in the practical application of the Protective Security Policy Framework (PSPF) and specialise in all forms of physical (physec), personnel (persec), information (infosec) and governance (govsec) security.

## SCEC-APPROVED CONSULTANTS

Our nationwide team includes ASIO T4 and SCEC-approved security consultants able to advise government and private sector clients in accordance with the PSPF and ASIO Technical Notes for security zone construction.

## CLIENT FOCUSSED & AGILE

We provide a client-focussed, high-quality service, agile to your requirements.

## DESIGN & INFORMATION MODELLING

SCG can provide clients with market-leading design solutions such as Security Information Modelling (SIM), to instantly and accurately model security designs, allowing you to visualise and mitigate security issues during the planning and design phase.

*From top: NEXT DC data centre; Australian War Memorial; Sydney ferries and wharves.*

# SERVICE CAPABILITY

## SECURITY PLANNING, DESIGN & ENGINEERING

Incorporating best-practice security approaches at the planning and design stages of new facilities or infrastructure will always result in the best outcomes.

Our consultants carefully plan and design security solutions using proven principles - such as defence in depth, crime prevention through environmental design (CPTED), engineering and risk management strategies - to meet client needs and reduce dependency on potentially costly static security controls.

Our team works with some of Australia's largest building and design firms to:

- Provide planning and design advice for new or upgraded infrastructure and assets
- Review the functional layout of facilities
- Undertake security and communications technology design
- Communication services and data cabling systems design
- Design engineering and documentation for project delivery and procurement
- Manage and oversee the installation of physical security
- Inspect, commission and test new and existing infrastructure
- Building and Security Information Modelling (BIM/SIM)

## SECURITY TECHNOLOGY & COMMUNICATIONS

Appropriate technology is crucial to successful security outcomes. Our solutions address or enhance physical and/or operational security arrangements and are catered specifically to your requirements, varying according to the nature of the risk, budget and security level required.

They could include:

- Security management systems
- Access control systems
- Intruder detection (commercial, Class 5 & Type 1A) alarm systems
- Duress alarm systems
- Biometric systems
- CCTV and surveillance systems
- Vehicle and pedestrian control systems
- Perimeter detection systems
- Secure network design
- Data and communications systems
- Structured cabling (fibre and copper backbone) systems and infrastructure
- Mobile radios and communications systems
- Electronic key management systems
- Contraband detection and screening systems
- Secure intercom and PA systems
- Physical security information systems
- Visitor management systems

## GOVERNANCE, RISK & ASSURANCE

SCG's consultants provide a systematic approach to support the security management and governance of your operations.

Our dedicated team includes specialist protective security and risk professionals who have developed and overseen security risk management and governance frameworks for owners/operators of public and private critical infrastructure, places of cultural importance, mass gatherings and commercial precincts.

Their advice considers the:

- Local risk environment, context or profile
- Operating environment
- Operational security model

**“Pragmatic advice and systems to effectively and efficiently reduce security risk to an acceptable level.”**

- Risk management framework
- Allocation and execution of security roles and responsibilities
- Level of security training & awareness

- Relevant policy and procedural frameworks
- Assurance and execution

Our services include:

- Security risk and threat assessments
- Security management plans
- Protective security advice (hostile vehicle mitigation, blast threat advice, etc)
- Security governance (including documentation development and implementation)
- Security audits, reviews and inspections
- Security vulnerability assessments
- Business continuity and emergency management
- Security and risk planning for construction, events and mass gatherings
- Security plans for heightened security levels and exercises
- Security capability development and training
- Critical infrastructure advisory
- Information security and governance
- Counter espionage and intelligence advisory
